Energy in Buildings and
Communities Programme

Changing Business-as-Usual: Building Code Virtual Diagnostics & Inspections

September 15, 2020, 13:00 – 14:30 UTC

EBC Building Energy Codes Working Group
Webinar

Mr. Jeremy Williams
U.S. Department of Energy

Some Administrative Notes

- We are recording this webinar so that we can make it available to EBC members in the future. Your participation indicates your consent.
- We would like everyone to mute themselves to minimize extraneous noise.
- Please put questions in comments and we will go over as many as possible during the discussion section (see the chat function at the bottom of the screen).

Webinar Overview

- Building on May BECWG webinar on Building Energy Issues and the COVID-19 Response
- Webinar Goals:
 - Explore opportunities for increasing virtual code inspections and energy audits in response to the pandemic, including the potential costs savings and additional impacts of remote inspections worldwide
 - Learn about experiences and new practices around the world in this space to address both the current situation as well as to inform post-pandemic approaches

Agenda

(*Times are in UTC)

- 13:00 Welcome and Topic Overview**
Jeremy Williams, U.S. Department of Energy
- 13:10 Lessons from Australian buildings during the COVID-19 pandemic | Q&A**
Carlos Flores, NABERS (Australia)
- 13:30 Welcome to the REMOTE Inspection Program “What it is and what it isn’t” Pre-, During and Post-COVID-19**
Valarie Evans, City of North Las Vegas (U.S.)
- 13:50 Remote Inspection: What It Is and What It Isn’t (A UAE Case Study)**
Bassem Khalil, Jensen Hughes Canada (UAE)
- 14:10 Open Discussion**
Moderator: Jeremy Williams, U.S. Department of Energy
- 14:30 Close**

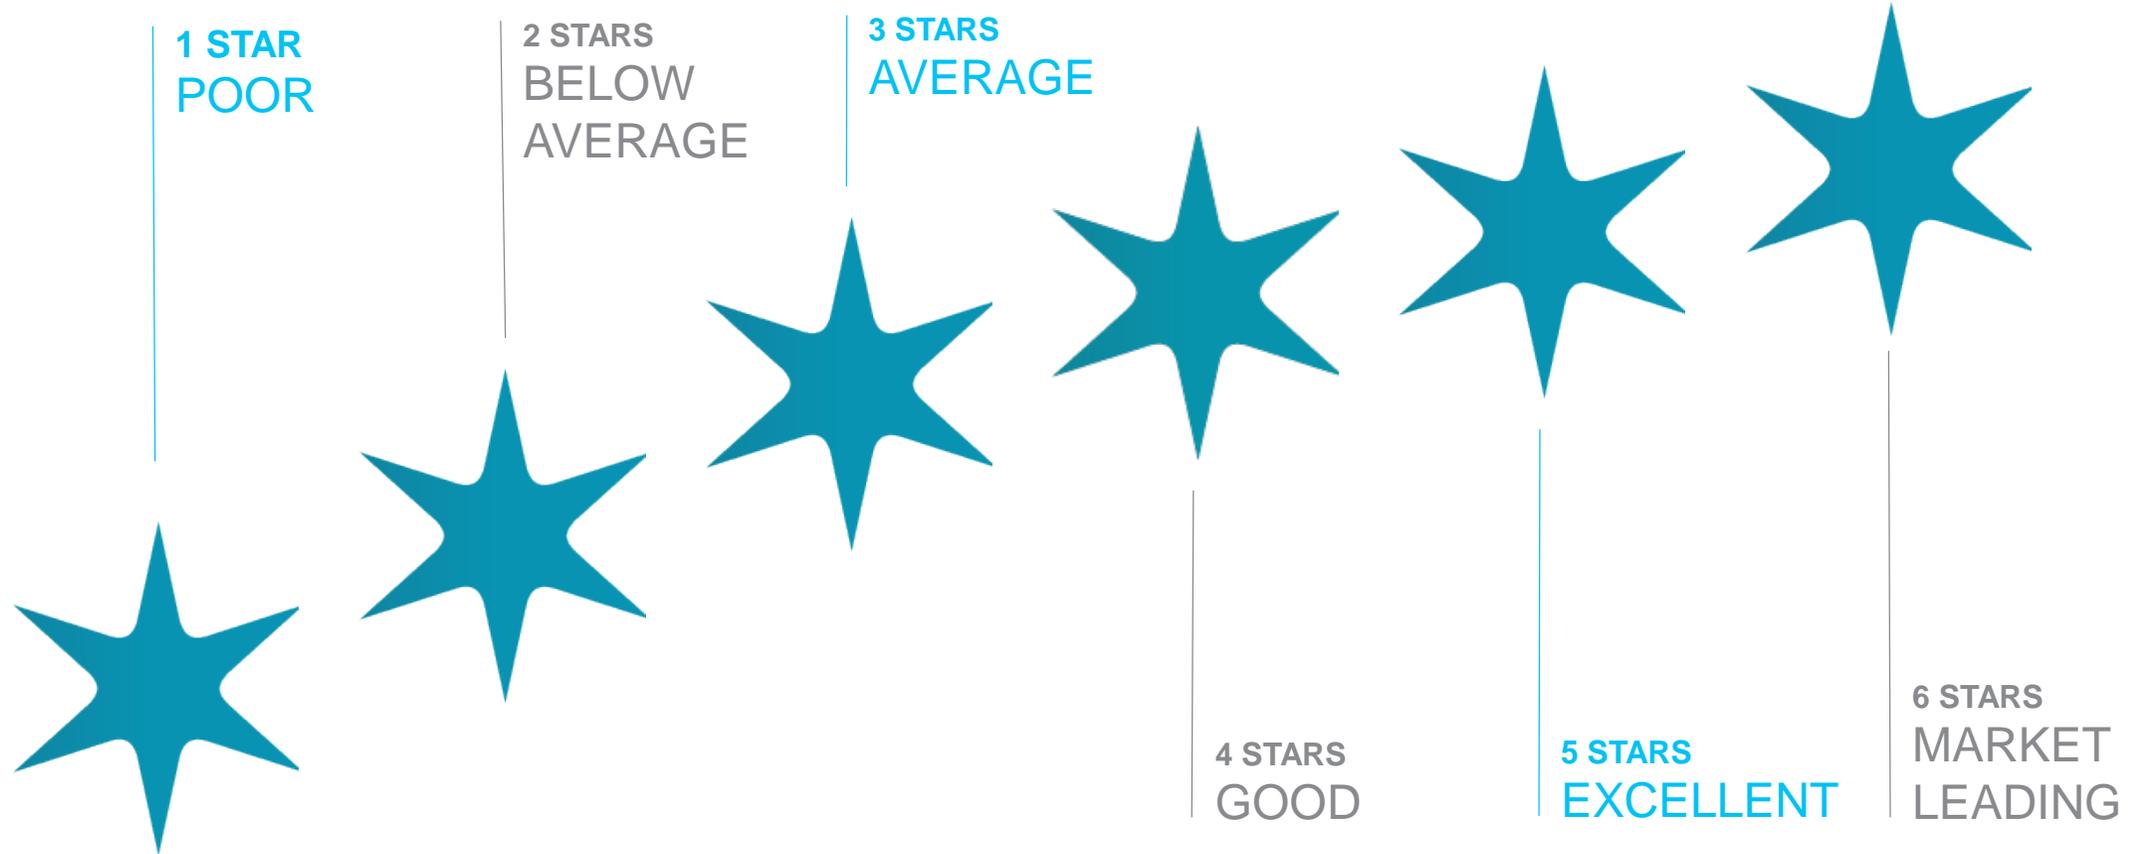

Mr. Carlos Flores

City of North Las Vegas

REMOTE Inspection Program

AGENDA

- Purpose
- Setting up Virtual Inspections
 - Process of Inspection
 - What the Contractor Needs
- Tips, Overcoming Hurdles, Lessons Learned

Pre-COVID-19: Residential Video Inspection Program

Purpose prior to COVID-19:

The purpose of the City of North Las Vegas Residential Video Inspection Program was initially intended to provide an alternative for eligible residential inspections, including limited re-inspections. The program required the customer to schedule the inspection via an Appointments Plus link on the City web page and to use the Skype app on a minimum 4G smart phone in order to interact with the City Inspector.

North Las Vegas went live with the Residential Video Inspection **Program** on July 1, 2019.

During COVID-19: Remote Inspection Program

Purpose during COVID-19:

- The purpose of the City of North Las Vegas Remote Video Inspection is to allow the development community **to have** continued momentum during the Coronavirus pandemic.
- To safeguard the City employees and the public while still performing critical inspections.
- There were several families waiting to move into new homes, as well commercial timelines that were dependent on us to maintain.

Remote Inspection Program

Setting up virtual inspections:

- List of **the** inspections allowed to be performed remotely.
- Determine the method of media used to stream the video i.e.: Skype, FaceTime, Hangouts, Google Duo, Google Meets, Zoom, WebEx.
- How is the inspection going to be scheduled?
- How is the inspection going to be performed?
- How **will you** follow-up with documents? QAA, Reports, Permits.
- Archiving. Are you going to keep the video?

Pre-COVID-19: Residential Video Inspection Program

Types of Inspections:

- Rooftop Solar
- Aluminum Patio Cover
- Water Heater
- Water Softener
- Plumbing Re-Pipe
- Gas Line Extension for BBQ and Fire Pits
- A/C Change out
- Attic FAU
- Main Line Water Repair
- Electrical Service Change
- Electric Car Chargers and Storage Systems
- Spa Circuit
- Detached Storage Sheds not to Exceed 600 Sq. Feet

Note: If for any reason the Inspector is not able to complete the inspection via the Residential Video Inspection Program, every effort will be made to route a field inspector to complete the inspection the same day. If this is not possible, the inspector will schedule a field inspection for the next business day.

During COVID-19: Remote Inspection Program

Inspections:

- All inspections to be performed via video means.
- No in-person inspections (staff working from home).
- Photos allowed when approved by the jurisdiction, provide enough photos to allow for a complete inspection.
- Documents sent via email PDF (third party daily reports, final reports, approved revisions etc.).

Pre-COVID-19: Residential Video Inspection Program

- Residential scopes **greatly benefit the homeowners**, as they do not have to take off time or wait for inspections.
- Benefit to contractors to potentially only make one trip to job site.
- No wasted travel time for inspectors.
- The Current procedure requires the work to be completed first, and then the inspection is scheduled for the following day. **For this program to benefit, we must be able to perform the remote inspection after the work is complete, before covers are re-installed, ladders put away, and before the contractor leaves the site.** This may necessitate a shift in how and when inspections are scheduled. A remote inspection after the contractor leaves the site, lessens the benefit for the customers, but still has merit.
- Appointment software like **Appointments Plus** used by City of North Las Vegas.

Welcome to our online reservation system!

In consideration of inspection through the Residential Video Inspection Program I, hereby agree to protect, defend, indemnify, and hold harmless the City of North Las Vegas, and its officers, representatives, managers and employees, against any and all claims, demands, awards, suits, judgment, liabilities, losses or damages arising out of, or being in any way connected with the design, construction and/or code compliance review for the referenced project.

The obligation should not be construed to negate, waive or otherwise reduce any other right or obligation of indemnity that may exist in the favor of the City of North Las Vegas.

It is further understood and agreed that if there are any defects or errors in the installed system discovered while using the video inspection program, I will remove or correct any and all components that do not conform to any code or other legal requirements.

For more information on how to prepare for a remote video inspection, please [click here](#).

To get started, please use the drop down menus on the left.

Remote Inspection Program

What the contractor/customer needs:

1. 4G Wireless service -
Ensure inspection location and smart phone or tablet has minimum 4G connectivity.
2. Media account i.e.: Skype, FaceTime, Google Duo, Google Meet, Hangouts, Zoom.
3. Prior to scheduled inspection time, ensure all necessary tools based on type of inspection are readily available. For example: tape measure, level, GFCI tester, flashlight, step ladder, etc.

Pre-COVID-19: Residential Video Inspection Program Process

1. Prepare to receive the Skype call:

- Must be at least 18 years old or with an adult to perform the video inspection.
- Ensure smart phone or tablet is fully charged.
- Respond to Skype call from Inspector.
- Be prepared to accept video call at scheduled time.
- Have all required tools as necessary for inspection.
- Turn off notifications that may interrupt the Skype call. This is an important step, because notifications can freeze Skype and will cause delays to the inspection and a possible failed inspection.
- Use ear buds with a microphone to improve communication.
- Set phone so that you have the small screen view of what the inspector sees:
 1. Tap the Skype screen to access the tool bar.
 2. Tap the camera icon.
 3. In the small view the inspector sees, tap the reverse camera icon.

2. Start inspection:

- Begin inspection at street view looking at the structure.
- The address must be shown in the initial view.
- Follow the direction of the inspector.
- Walk inspection in a clockwise direction horizontally then bottom to top vertically (if more than one floor).
- Make notes of any corrections.

3. Inspection results:

- Inspector will inform you if the inspection receives a pass, partial or fail.
- The inspector will update the permitting system with the results at the completion of the Skype call.

During COVID-19: Remote Inspection Program Process

1. Inspector gets schedule at home via VPN or other means

- Inspector calls each contact to schedule inspection, gives time window, and agrees on media platform.
- Some inspectors have contractor/customer text them when they are on project site.
- Inspector allots a minimum amount of time to perform inspection.
- Inspector lets customer know they may be performing an inspection when their time slot occurs and will call them back when finished.
- Inspector gets all documents electronically or via video at the time of the inspection.

2. Start Inspection

- Inspector validates permit information.
- Inspector accesses all documentation.
- Inspector guides the inspection process.
- Contractor/customer follows direction of the inspector.

Post-COVID-19: Remote Inspection Program

Tips, Overcoming Hurdles, Lessons Learned

- Contact information of contractor/customer is imperative.
- Utility reconnections
- Getting Plans downloaded for projects inspectors go to regularly.
- Get contractors to think like an inspector.
- Filter all inspections to Appointments plus or another scheduling platform so the customer can choose the inspection

Changes will continue to occur AS THE PROCESS GROWS.

Post-COVID-19: Remote Inspection Program

When life returns to “normal”

- Identify efficiencies that were created due to Covid-19.
- Increase program guidelines to allow for more inspections via video.
 - Commercial scopes
 - Home Builders
- Identify the projects where an in-person inspection is most critical.
- Follow up on projects that may have needed a closer look.

There is no pain in change itself, there is only pain in resistance to change

Remote Inspection Program

Thank you

REMOTE INSPECTION:
What It Is and What It Isn't (A UAE CASE STUDY)

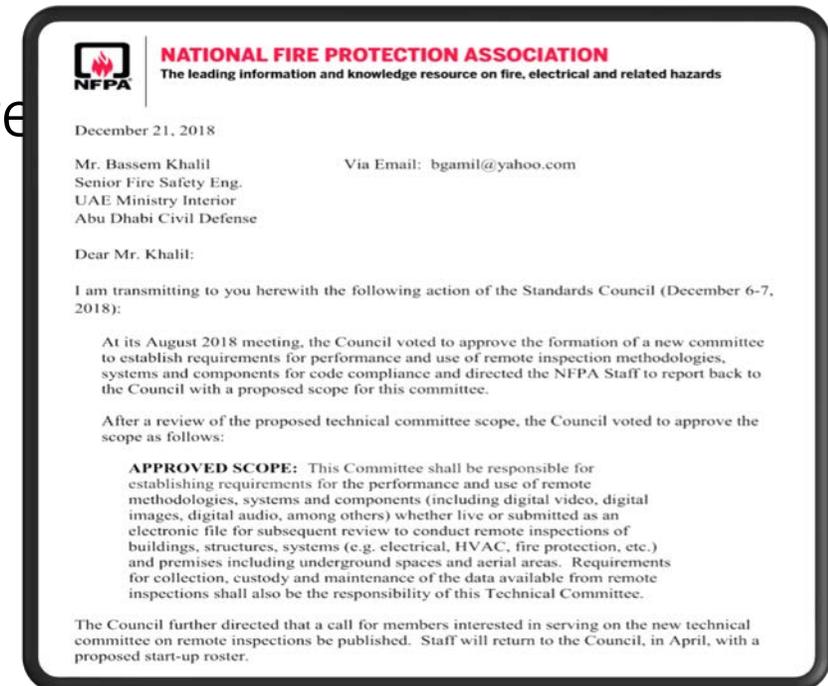

September 2020

jensenhughes.com

- Background and History
- Remote Inspection Model and Objectives
- Best Practices and Methods
- Future Developments
- UAE Case Study
- NFPA 915
- Concluding thoughts

Remote Inspection (RI) is simply an inspection communication reporting method intended to enhance inspection & testing capabilities remotely, packaged and delivered in an innovative, practical and smart way, utilizing existing project construction resources & technologies, adapting to our current and future needs; to ensure that processes, installations, policies & regulations are being performed, followed and implemented with higher quality than current inspection and reporting methods.

- In 2012, UAE witnessed a major boom in construction, where it's a major challenge keeping up with the speedy developments.
- The remote inspection idea was first implemented by UAE Ab- Dhabi Civil Defense, to hand over the iconic 1.9 billion-dollar Cleveland Clinic project.
- In 2015, the first remote inspection guidelines were the umbrella of the UAE Fire Code.
- In 2018, NFPA Standards Council Approved a proposal by UAE Civil Defense to develop a new standard, NFPA 915 for remote inspections.

42 The Distant Inspection Program

The future of fire and life safety system inspections and training includes commissioning and training with the latest technologies in audio-visual filming.

By Bassem Khalil

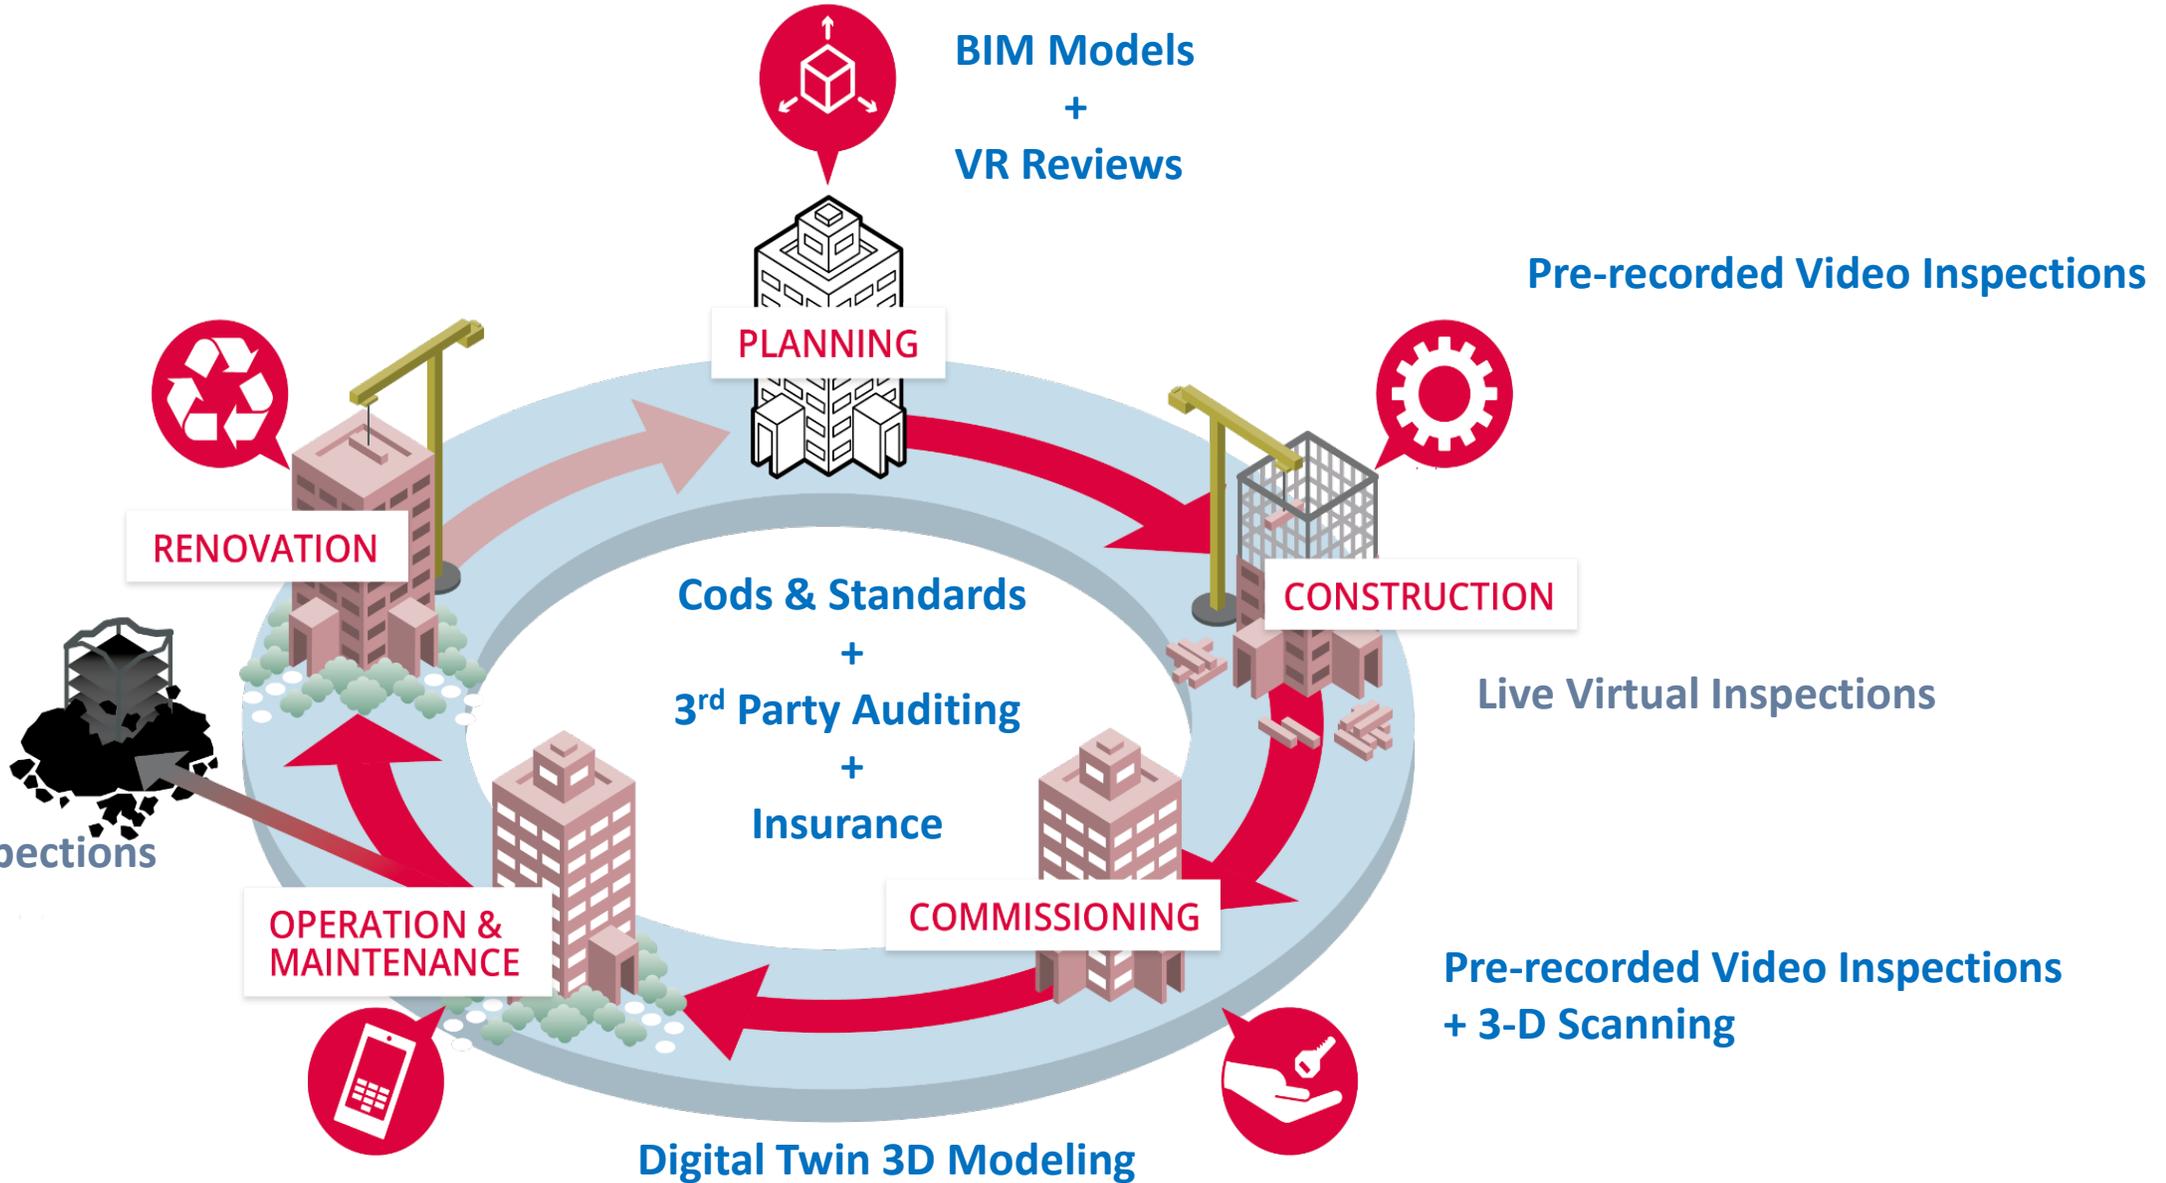

- Enhance inspections' quality.
- Provide quality services to end users.
- Achieve highest levels of safety.
- Develop new training tools and materials.
- Ensure knowledge transfer.
- Reduce inspection costs & save time.
- Regulate the unregulated parts of the inspection.

*Provide a resilient reporting system tool
for permitting, insurance companies,
government officials & building owners*

Systems Monitoring + I.O.T sensors for monitoring, preventive maintenance, and accident & damage prediction + Live Virtual Inspections + Digital twins

1- Live Virtual Inspections

2- Remote Pre-recorded Video Inspections

- 3D Scanning

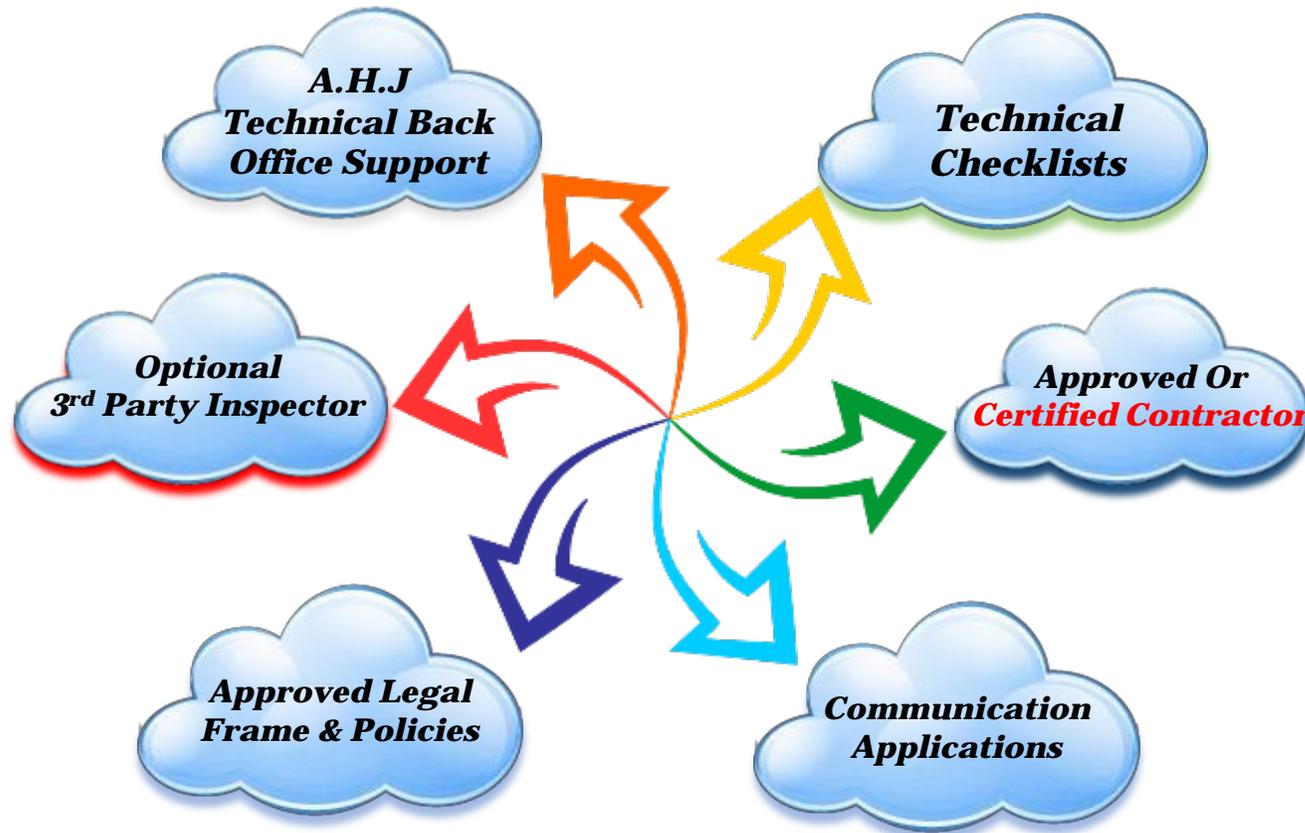

3- Post Construction Building & Systems Monitoring

- Digital twins
- 3D modeling
- Systems monitoring
- I.O.T., monitoring, preventive maintenance, and accident & damage prediction

1- Live Virtual Inspections

Recommended Use For Periodic & Simple Re-inspections

Recommended Tools & Accessories

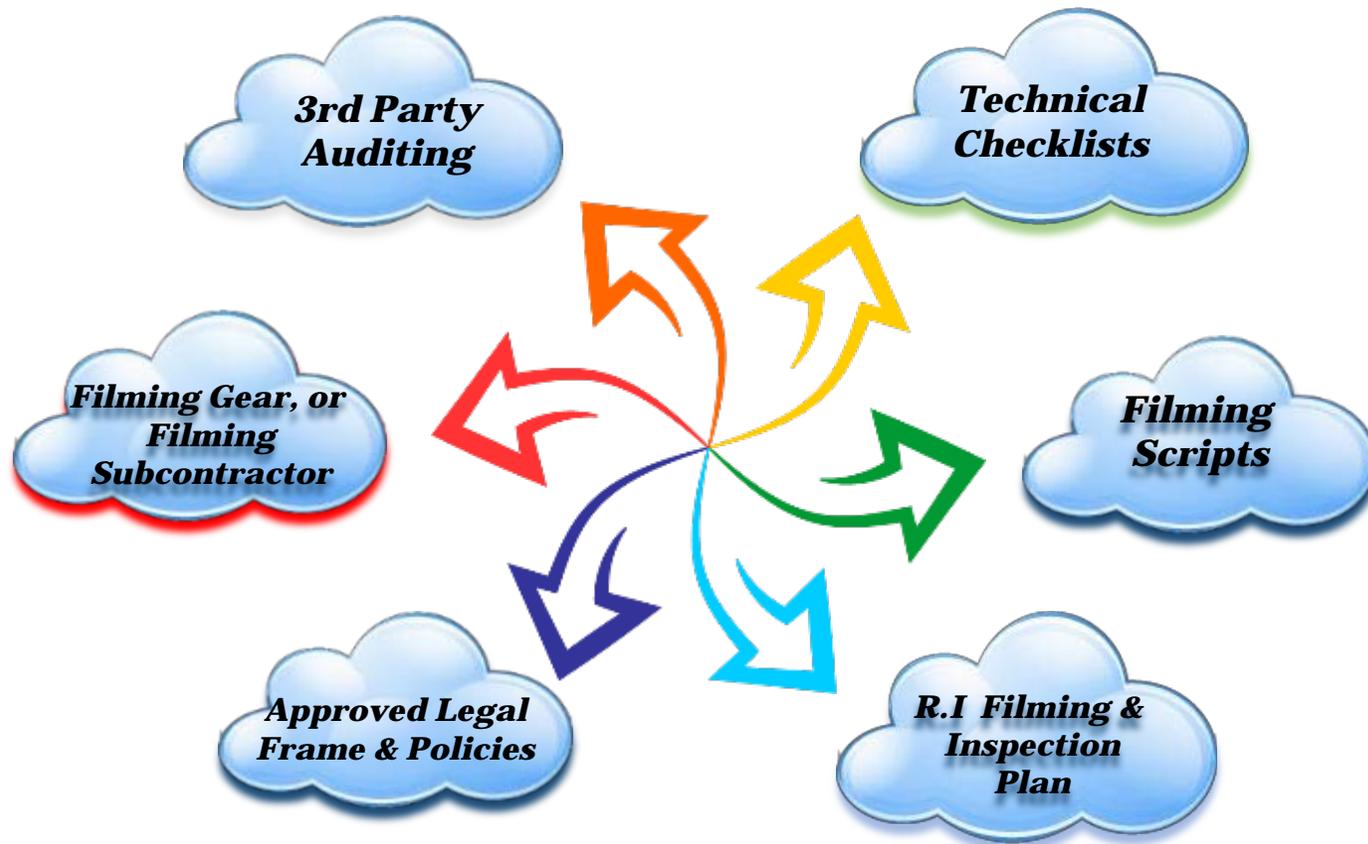

Redundant mobile phones
& power banks

Tripod or stabilizing phone holder

Internet 3g or WIFI Coverage

2- Remote Pre-recorded Video Inspections

Recommended Use For New Buildings

Building final testing and commissioning, where inspection videos are audited by a third-party inspection. (e.g. a high-rise inspection)

- **3-D modeling versus 3-D scanning (360)**
- **Object recognition technology**

Image Classification

Classify an image based on the dominant object inside it.

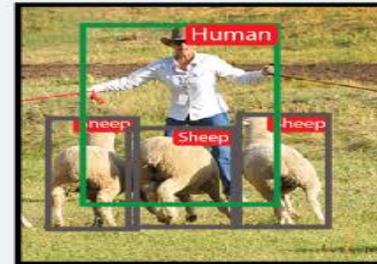

datasets: MNIST, CIFAR, ImageNet

Object Localization

Predict the image region that contains the dominant object. Then image classification can be used to recognize object in the region

datasets: ImageNet

Object Recognition

Localize and classify all objects appearing in the image. This task typically includes: proposing regions then classify the object inside them.

datasets: PASCAL, COCO

Semantic Segmentation

Label each pixel of an image by the object class that it belongs to, such as human, sheep, and grass in the example.

datasets: PASCAL, COCO

Instance Segmentation

Label each pixel of an image by the object class and object instance that it belongs to.

datasets: PASCAL, COCO

Keypoint Detection

Detect locations of a set of predefined keypoints of an object, such as keypoints in a human body, or a human face.

datasets: COCO

Smart Monitoring System for Private & Public buildings :

Installation of Dubai Civil Defence 24x7 Smart Monitoring System in all public and private buildings and establishments in Dubai is a mandatory requirement laid down by law No 24 of 2012. With the system in place, Dubai Civil Defence will be able to monitor buildings in real-time for life and safety alarms. E-monitoring of this magnitude will strengthen the safety infrastructure of the city to increase safety measures. From the Souks of Old Dubai to the iconic skyscrapers, Dubai Civil Defence will be able to effectively protect the city's national wealth and the people who move in and around it. Using state of the art M2M technology, every building and asset within Dubai, both government and privately owned, will be monitored for fire, lift and emergency alarms 24x7. Under the visionary leadership of H. H. Sheikh Mohammed Bin Rashid Al Maktoum, Vice-President and Prime Minister of UAE and Ruler of Dubai, Dubai Civil Defence is a dynamic and motivated organization

- 24x7 monitoring for life and safety alarms
- Accurate & timely reporting
- Early notification of an emergency
- Coordinating emergency services including fire brigade, police and medical services
- Supplying Civil Defence with a pre-existing information database of the building containing the shortest route to the building, the number of levels, emergency entrance and exits, surrounding buildings, hazardous materials inside the building and nearest water supply point. This allows Civil Defence to choose the suitable equipment for every accident allowing them to respond more effectively
- A range of alarm signals sent via the system to Civil Defence, including fire alarm, elevator alarm, emergency alarm, safety equipment malfunction, power interruption, low water level in reservoirs, water pump malfunction and gas leakage alarm
- Regular testing of fire-fighting equipment such as fire pumps are coordinated from the control room to ensure that systems are live and active

- Three draft development meetings held; Last meeting was virtual :
- NFPA 915 is now published for public input. www.nfpa.org/915
- NFPA 915 Public Input to close on June 1, 2021.

- **Scope and Purpose:**

- Procedures, methods, and documentation associated with remote inspections
- Deliver an equivalent or improved result as that which would be obtained with other inspection methods
- Process must be approved by AHJ
- Does not apply to periodic inspections and tests

- Devices
 - Wireless
 - Digital
 - Non-digital
 - Vehicles

Data Collection

- + Written
- + Photograph
- + Video
- + Audio

Remote Inspection Is Not:

- An easier method of inspection
- New
- A monitoring system
- Yet regulated
- A complete replacement to normal inspections
- Remote

Remote Inspection Is:

- More detailed
- A higher quality process
- Better documentation
- Innovative
- A great BD tool
- A high-quality reporting system

Remote Inspections are Here to Stay
